KEEP'M CAGED! The new RICE Hydro "Line Cage" Safety Anchor & Securement Device

RICE Hydro introduces a brand new, patent number US 7,905,455, safety secure and anchoring device for use in fire hose testing. The Line Cage was designed by a Fire Captain, with the safety and well being of his fellow fire fighting brothers in mind. A close call that ended luckily in only minor injuries for the two fire fighters in his department, it could have been much worse. Adding to that same SAFETY environment, RICE Hydro FH-series fire hose testers are already designed to prevent WILD LINES. Manufactured with high volume at low pressure to fill the lines, and low volume at high pressure to test, eliminating the cause of an uncontrollable wild line from rupture or failure during the testing process.

- Meets NFPA 1962.7.6.2.6 requirements of "Securing and Anchoring" the fire hose while being tested.
- Heavy gauge welded steel frame, powder coated
- Locking hitchpins enclose and secure hose to Line Cage
- Quick links installed for quick and easy ANCHORING of Line Cage
- Safety - limits the mobility of line when rupture occurs
- The Line Cage is designed with multiple locking holes to accommodate various hose sizes.
- Stops a burst or ruptured line from retracting beyond the location of the tool, which should be placed approximately 2 FEET from the distal end of hose line.
